**Opening Strategy** Nov 10 2020 Strategy is becoming more 'open' - more transparent and more inclusive. Opening Strategy tells the story of how corporate strategists and strategy consultants have worked since the middle of the last century to open up the strategy process. First strategic planning, then strategic management, and now 'open strategy' have all brought more people into the strategy process and provided more strategic information, for the benefit of both business and society at large. Informed by interviews with corporate strategists and consultants at leading firms such as General Electric and McKinsey & Co, and drawing on the historical archives of strategy's pioneers, this book provides vivid insights into the trials and tribulations of practice change in the strategy profession. Above all, it stresses the hard work of the little recognized and sometimes eccentric individuals who have been leaders in practice change. By building on a wide range of illustrations, covering both successes and failures, the book draws out general lessons for practice innovation in strategy. Those studying the topic will be able to set standard strategy techniques in historical and social context and develop new areas for investigation, while practising executives and consultants should gain a sense of how to innovate in strategy - and how not to.

**The Audit Society** Nov 30 2019 Since the early 1980s there has been an explosion of auditing activity in the United Kingdom and North America. In addition to financial audits there are now medical audits, technology audits, value for money audits, environmental audits, quality audits, teaching audits, and many others. Why has this happened? What does it mean when a society invests so heavily in an industry of checking and when more and more individuals find themselves subject to formal scrutiny? The Audit Society argues that the rise of auditing has its roots in political demands for accountability and control. At the heart of a new administrative style internal control systems have begun to play an important public role and individual and organizational performance has been increasingly formalized and made auditable. Michael Power argues that the new demands and expectations of audits live uneasily with their operational capabilities. Not only is the manner in which they produce assurance and accountability open to question but also, by imposing their own values, audits often have unintended and dysfunctional consequences for the audited organization.
