Adventures of Captain Hatteras: The desert of ice. A trip from the earth to the moon. A tour of the moon Oct 11 2020

Ice Feb 01 2020 Like the adventurer who circled an iceberg to see it on all sides, Mariana Gosnell, former Newsweek reporter and author of Zero Three Bravo, a book about flying a small plane around the United States, explores ice in all its complexity, grandeur, and significance. More brittle than glass, at times stronger than steel, at other times flowing like molasses, ice covers 10 percent of the earth's land and 7 percent of its oceans. In nature it is found in myriad forms, from the delicate needle ice that crunches underfoot in a winter meadow to the massive, centuries-old ice that forms the world's glaciers. Scientists theorize that icy comets delivered to Earth the molecules needed to get life started, and ice ages have shaped much of the land as we know it. Here is the whole world of ice, from the freezing of Pleasant Lake in New Hampshire to the breakup of a Vermont river at the onset of spring, from the frozen Antarctic landscape that emperor penguins inhabit to the cold, watery route bowhead whales take between Arctic ice floes. Mariana Gosnell writes about frostbite and about the recently discovered 5,000-year-old body of a man preserved in an Alpine glacier. She discusses the work of scientists who extract cylinders of Greenland ice to study the history of the earth's climate and try to predict its future. She examines ice in plants, icebergs, icicles, and hail; sea ice and permafrost; ice on Mars and in the rings of Saturn; and several new forms of ice developed in labs. She writes of the many uses humans make of ice, including ice-skating, ice fishing, iceboating, and ice climbing; building ice roads and seeding clouds; making ice castles, ice cubes, and iced desserts. Ice is a sparkling illumination of the natural phenomenon whose ebbs and flows over time have helped form the world we live in. It is a pleasure to read, and important to read—for its natural science and revelations about ice's influence on our everyday lives, and for what it has to tell us about our environment today and in the future.

Ice Bears and Kotick Sep 09 2020 This is the story of an extraordinary boat journey that two men made for the fun of it. They rowed and sailed through pack ice, past glaciers and icebergs. They survived whales, polar bears, starvation and capsizing. In doing so, they completed the first circumnavigation of the Arctic Island of Spitsbergen in an open rowing boat. Along the way they learned about themselves and about life, experienced a frozen wilderness that will most likely disappear before the century is out. This is a story for small-boat sailors, for lovers of ice and snow, and for anybody who wanted to run away to sea.

Cold as Ice Jan 02 2020 "This book has everything I like! Hot hero, strong heroine, kidnapping, a second chance, set in Alaska, and enough suspense to keep me turning the pages as fast as I can!" -New York Times bestselling author Susan Stoker. Daphne Du Maurier Award For Excellence In Mystery/Romantic Suspense finalist. When Darby O'Roarke wakes up in a strange house with a dead man - with no memory of what happened - she knows who she has to call: FBI Supervisory Special Agent Eban Winters...the man she fell for, and who rejected her, last summer. A negotiator isn't supposed to get involved with kidnap victims, and Eban has been trying to avoid the temptation that is Darby O'Roarke ever since they met. One frantic phone call has him racing to Alaska to uncover the truth, but he faces stubborn opposition from the local police, and a growing media frenzy. Getting Darby released from jail and keeping her safe is his first priority. When another woman is brutally slain, evidence emerges that suggests Darby is being framed, and that the culprit is a vicious serial killer who has eluded the FBI for more than a decade...and, now, the killer has Darby in their sights.
