Local Flaps in Head and Neck Reconstruction Sep 07 2020 This book is truly a classic, beloved by plastic surgeons throughout the world. Its strength lies in its simple, elegant approach to solving common reconstructive problems encountered by plastic surgeons at all levels of training. Its appeal transcends specialty interests, with aesthetic and reconstructive surgeons alike finding this book to be an invaluable resource for daily practice. Its comprehensive coverage makes it an essential addition to any surgeon's library. Totally revised and updated with color throughout, this new edition has been totally revised and updated with over 150 additional pages, two new chapters, and numerous new cases, flaps, and problems. Additionally, there are color illustrations, summary tables highlighting the best flaps for various clinical situations, annotated bibliographies, and much, much more. Throughout these pages, the reader benefits from Dr. Jackson's enormous experience and wisdom as he makes note of special tips, critical maneuvers, and important principles that warrant emphasis. Each flap is accompanied by a description of potential problems, and each anatomic area for reconstruction ends with a technique of choice so that the reader can understand the decision-making process that is involved in flap selection. The book begins with a chapter on basic principles, which reviews the important oncologic concerns that must precede any reconstructive-surgery procedure. Principles of tissue movement and flap design are accompanied by drawings that aid the reader in planning. The next seven chapters address each anatomic region. Alternate methods for closing defects in each region are presented. Both simple and complex solutions are detailed. Each reconstructive option is presented in great detail with operative photos as well as beautiful illustrations to depict flap design, elevation, and closure, and to more clearly explicate complex flap reconstructions for difficult problems. Common mistakes and the limitations of each flap are clearly delineated. Chapters on each anatomic region conclude with new summary tables that help the reader quickly identify the best reconstructive options for specific problems. Two Totally New Chapters The final two chapters are new to this edition-Tissue Expansion and Problems and Complication. The chapter on tissue expansion fully details the advantages to be gained from tissue expansion and the applications in each area of the head and neck when local flaps are planned. The Problems and Complications chapter covers common problems encountered in head and neck reconstruction as well as avoidance and treatment of complications should they occur. It concludes with a section on tricks and innovations, which discusses diverse topics such as the use of scarlet red for wound healing, the aesthetic repair of torn earlobes,

and the repair of cocaine-induced palatal fistula. There is clearly a wealth of information and much to be learned and applied by surgeons at all levels of expertise.

Issues in Flap Surgery Jan 24 2022 The development of flap surgery parallels the increasing complexity of soft-tissue defects needing reconstruction. Random and pedicled flaps as well as free muscle and fasciocutaneous flaps have helped to reconstruct single soft-tissue defects. The multiplicity of defects needing reconstruction and donor-site morbidity in addition to tailored reconstruction have called for a revision of flap concepts in favor of perforator flaps. Unfortunately, we are faced with increasingly complex reconstructive issues. New reconstructive techniques, such as the Ilizarov method, have made orthopedic reconstruction after high energy and complex trauma possible. Revision surgeries after tumor resection and plastic surgery have brought about soft-tissue defects associated with extensive fibrosis and necrosis. As a result, previously nonsalvageable limbs have been salvaged. The reconstructive surgeons are faced with the following situations: multiple soft-tissue defects, extensive fibrosis, possibility of major vessel loss, and possibility of damage of several perforators.

Secret Projects of the Luftwaffe - Vol 1 - Jet Fighters 1939 -1945 Nov 29 2019 Germany's air ministry was quick to grasp the potential of the jet engine as early as 1938 and by 1939 several German aircraft manufacturers were already working on fighter designs that would utilize this new form of propulsion. Rocket engines too were seen as the way of the future and companies were commissioned to design fighters around them. As the Second World War began, the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket-propelled interceptor. And as the war progressed, efforts were increasingly made to find better ways of utilizing jet, rocket and latterly ramjet engines in fighter aircraft. Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had ever seen. They proposed rotating wing ramjet fighters, arrowhead-shaped rammers, rocket-firing bat-winged gun platforms, sleek speed machines, tailless flying wings, tiny mini fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors. Secret Projects of the Luftwaffe Volume 1: Jet Fighters 1939-1945 by Dan Sharp, based on original research using German wartime documents, offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs, illustrations and period documentation from archives around the world.
