No Nation for Women Sep 22 2021 No Nation for Women takes a hard, close look at what makes India unsafe for its women — from custodial rapes and honour killings to rapes of minors and trafficking — the author uncovers many unpalatable truths behind what we are familiar with as newspaper headlines only... Numbers convey, in part, why India is referred to as one of the world's rape capitals — one woman is raped every 15 minutes; and, in 50 years, there has been a staggering rise of 873 per cent in sexual crimes against girls. And beyond the numbers and statistics, there are stories, often unreported — of women in Damoh, Madhya Pradesh, who are routinely raped if they spurn the advances of men; of girls from de-notified tribes in central India who have no recourse to justice if sexually violated; of victimized lower-caste girls in small-town Baduan, Uttar Pradesh; of frequent dislocation faced by survivor families in West Bengal; of political wrath turning into rape in Tripura. Priyanka Dubey travels through large swathes of India, over a period of six years, to uncover the accounts of disenfranchised women who are caught in the grip of patriarchy and violence. She asks if, after the globally reported December 2012 gang-rape of 'Nirbhaya' in New Delhi, India's gender narrative has shifted — and, if it hasn't, what needs to be done to make this a nation worthy of its women.

Gandhi Today Nov 12 2020 What became of the Gandhian tradition in India following the death of Mahatma Gandhi? Did it quietly die away? Or were there still Indians who believed in his philosophy and methods, committed to continuing his work? These were the questions that sent independent journalist Mark Shepard to India in 1978-79. There he found that the tradition begun by Gandhi was very much alive, in such individuals, groups, and movements as: -- An acclaimed saint who collected over four million acres in gifts of land for the poor. -- A leader of a nationwide protest movement that helped topple India's ruling party in the mid-1970s. -- A Peace Army that fought riots with nonviolence. -- A "Hug the Trees!" movement that physically blocked excessive logging in the Himalayas. -- A People's Court that even tried cases of murder and government corruption. -- A development center helping 400 villages rise from poverty. -- A nationwide movement of villages in which all land was held in common and decisions were made by unanimous consent. Learn about all these and more in this engaging report on the legacy of the twentieth century's greatest peacemaker and revolutionary.

//////////////////// Mark Shepard is the author of "Mahatma Gandhi and His Myths," "The Community of the Ark," and "Gandhi Today," called by the American Library Association's Booklist "a masterpiece of committed reporting." His writings on social alternatives have appeared in over 30 publications in the United States, Canada, England, Norway, Germany, the Netherlands, Switzerland, Japan, and India. ////////////////////// "A masterpiece of committed reporting. . . . History that needs to be better known, told in clear, compelling, common language." -- American Library Association Booklist, Feb. 1, 1987 (starred review) "Shepard has done a marvelous job describing individuals and groups keeping the spirit of Gandhi alive in India and throughout the world. His book presents living proof the ideals of the Mahatma will never die." -- Cesar Chavez, founder and President, United Farm Workers of America "This lively book fills a critical gap in our understanding of Gandhi's way. . . . A source of hope and inspiration." -- Joanna Macy, author/activist "A remarkable job of introducing the contemporary Gandhian movement -- readable, honest, challenging." -- Jim Forest, General Secretary, International Fellowship of Reconciliation "A fascinating study. . . . As useful as it is encouraging." -- Michael Nagler, founder, Peace and Conflict Studies Program, University of California at Berkeley, and author, America Without Violence "A fast-moving account of a living tradition. . . . Full of good ideas for peacemakers." -- Virginia Baron, Editor, Fellowship "The author is a committed partisan of Gandhian thought and methods, but he is also a reporter who makes a case that Gandhi is an important figure who keeps on marching. . . . Among [the successful experiments he visited] are some remarkable ones." -- United Press International (UPI), Jan. 18, 1988 "Highly recommended. . . . Will provide encouragement and inspiration to those working for a better world." -- Peace Magazine (Canada), Dec. 1987-Jan. 1988 "Finally there is a small, readable book on the Gandhian legacy. . . . Encouraging and positive." -- Thomas Weber, Legal Studies, La Trobe University (Australia) "May prove to be the most important book of 1987." -- Green Letter, Spring 1987

Neosporosis in Animals May 31 2022 Key features: Written by the scientist who named this parasite and was the first to set up proper

diagnostic techniques Serves as the first ever book to provide information on the parasite structure, biology, pathogenesis, clinical signs, epidemiology, prevention, and control of neosporosis Covers both approaches toward preventing & controlling this disease: Developing an efficacious vaccine and sound cattle management practices Contains a wealth of illustrations, including many of the author's original photographs of the parasite Provides basic information on immunologic and molecular aspects of the disease Abortion is a worldwide problem in the livestock industry accounting for annual economic losses of billions of dollars, and *N. caninum* is a major cause of it. Neosporosis is a newly recognized disease of animals. Until 1988 it was misdiagnosed as toxoplasmosis. Considerable progress in understanding the biology of neosporosis has been made in the last 30 years, resulting in more than 2,000 scientific publications. The economic importance of abortion in cattle, and the availability of knowledge, reagents, and technology used to study toxoplasmosis, have contributed to the rapid progress in understanding the biology of neosporosis. Written by pioneers in this field, Neosporosis in Animals presents a comprehensive summary of the biology of neosporosis, starting with chapter 1 on the historical background of the discovery of the disease. Subsequent chapters deal with general aspects of the biology of *N. caninum* (chapter 2), techniques (chapter 3), and the disease caused by this parasite in cattle (chapter 4), dogs (chapter 5), and all other animals including sheep, pigs, primates and humans (chapters 6-18). This book provides, for the first time in a single authoritative source, a complete account of the structure, biology, clinical disease, diagnosis, epidemiology, treatment, attempts at immunoprophylaxis, and control in all hosts. There are 175 illustrations and tables devoted to the life cycle, structure of parasitic stages, and lesions. More than 2100 references are cited, allowing the reader to locate additional information on specific topics in an efficient way. This book will be useful to a broad range of researchers in biology and veterinarians.

Signs and Cities Mar 29 2022 Signs and Cities is the first book to consider what it means to speak of a postmodern moment in African-American literature. Dubey argues that for African-American studies, postmodernity best names a period, beginning in the early 1970s, marked by acute disenchantment with the promises of urban modernity and of print literacy. Dubey shows how black novelists from the last three decades have reconsidered the modern urban legacy and thus articulated a distinctly African-American strain of postmodernism. She argues that novelists such as Octavia Butler, Samuel Delany, Toni Morrison, Gloria Naylor, Ishmael Reed, Sapphire, and John Edgar Wideman probe the disillusionment of urban modernity through repeated recourse to tropes of the book and scenes of reading and writing. Ultimately, she demonstrates that these writers view the book with profound ambivalence, construing it as an urban medium that cannot recapture the face-to-face communities assumed by oral and folk forms of expression.

Short Stories Mar 05 2020 The book contains stories about human values in our lives that we have cherished over centuries, and which continue to enrich our lives even today. In the advanced technological age, they retain their importance and balance our personalities. They make society stable and give meaning to our lives. They have particular significance for the growing generation that shapes the world of tomorrow. The stories are fictional, but they relate to life as we live and

face every day. They are about love and hatred, compassion and jealousy, self-interest and concern for others – the different facets of life that people experience in the world of emotions. They also talk of the human dilemma between idealism and practical life, of courage in adversity and realisation of dreams and aspirations and the need to reaffirm our faith in the goodness of man and divine justice. They concern especially the young and adolescent mind that is impressionable in the critical age and forms our ethical side of life that helps us avoid the pitfalls of emotional crisis in later life.

Adaptive Phytoremediation Practices Jun 07 2020 Adaptive Phytoremediation Practices: Resilience to Climate Change discusses current phytoremediation practices under an ever-pressing need for environmental remediation due to increasing pollution in a changing climate. Phytoremediation is increasingly relevant due to plants' high effectiveness and sustainability during remediation and the ability of potential phytoremediation plants to adapt to changes in climate. Changing climatic conditions cause various biotic and abiotic stresses in plants and thereby negatively affect a plant's establishment, growth, and yield. Therefore, the integration of suitable climate-resilient plants and adaptive remedial practices along with proper agro-biotechnological interventions is of paramount importance to mitigate the rapidly growing pollution. This book is an important reference for environmental scientists, particularly those working in pollution management and remediation, forming an up-to-date collection of phytoremediation practices that provide sustainable solutions as a holistic approach for carrying out phytoremediation under changing climatic conditions.

Provides up-to-date research and understanding on how to design, refine, and implement adaptive phytoremediation practices Focuses on enhancing resilience in plants toward climate change and explanations of the characteristics of resilient plants for adaptive phytoremediation practices in a changing climate Presents methods and solutions for adapting phytoremediation practices to climate change
