Applied Semantic Web Technologies Aug 19 2021 The rapid advancement of semantic web technologies, along with the fact that they are at various levels of maturity, has left many practitioners confused about the current state of these technologies. Focusing on the most mature technologies, Applied Semantic Web Technologies integrates theory with case studies to illustrate the history, current state, and future direction of the semantic web. It maintains an emphasis on real-world applications and examines the technical and practical issues related to the use of semantic technologies in intelligent information management. The book starts with an introduction to the fundamentals—reviewing ontology basics, ontology languages, and research related to ontology alignment, mediation, and mapping. Next, it covers ontology engineering issues and presents a collaborative ontology engineering tool that is an extension of the Semantic MediaWiki. Unveiling a novel approach to data and knowledge engineering, the text: Introduces cutting-edge taxonomy-aware algorithms Examines semantics-based service composition in transport logistics Offers ontology alignment tools that use information visualization techniques Explains how to enrich the representation of entity semantics in an ontology Addresses challenges in tackling the content creation bottleneck Using case studies, the book provides authoritative insights and highlights valuable lessons learned by the authors—information systems veterans with decades of experience. They explain how to create social ontologies and present examples of the application of semantic technologies in building automation, logistics, ontology-driven business process intelligence, decision making, and energy efficiency in smart homes.

A Cowboy of the Pecos Sep 27 2019 In the late 1880s, the Pecos River region of Texas and southern New Mexico was known as "the cowboy's paradise." And the cowboys who worked in and around the river were known as "the most expert cowboys in the world." A Cowboy of the Pecos vividly reveals the story of the Pecos cowboy from the first Goodnight-Loving cattle drive to the 1920s. These meticulously researched and entertaining stories offer a glimpse into a forgotten and yet mythologized era. Includes archival photographs.

Wildlife Conservation by Sustainable Use Feb 10 2021 One of the major challenges of sustainable development is the interdisciplinary nature of the issues involved. To this end, a team of conservation biologists, hunters, tourist operators, ranchers, wildlife and land managers, ecologists, veterinarians and economists was convened to discuss whether wildlife outside protected areas in Africa can be conserved in the face of agricultural expansion and human population growth. They reached the unequivocal - if controversial - conclusion that wildlife can be an economic asset, especially in the African savannas, if this wildlife can be sustainably utilized through safari hunting and tourism. Using the African savannas as an example, Wildlife Conservation by Sustainable Use shows that in many instances sustainable wildlife utilization comprises an even better form of land use than livestock keeping. Even when population pressure is high, as in agricultural areas or in humid zones, and wild animal species can pose a serious cost to agriculture, these costs are mainly caused by small species with a low potential for safari hunting. Although ranching has a very low rate of return and is hardly ever profitable, the biggest obstacle to the model of sustainable wildlife use outlined in Wildlife Conservation by Sustainable Use is from unfair competition from the agricultural sector, such as subsidies and lack of taxation, resulting in market distortion for wildlife utilization. This book thus gives valuable evidence for a different way of working, providing arguments for removing such distortions and thereby facilitating financially sound land use and making it a rationally sound choice to conserve wildlife outside protected areas. The expert team of authors, most of whom came together at a workshop to thrash out the ideas that were then developed into the various chapters, has written a superb account of recent research on this complex subject, resulting in a book that is a major contribution to our understanding of sustainable use of land. The important conclusion is that wildlife conservation can be possible for landholders and local communities if they have a financial interest in protecting wildlife on their lands.

Peverelly's National Game Nov 29 2019 Peverelly's Book of American Pastimes, which covered several sports from badminton to horseracing, is best known for its dominant chapter on base ball, "The National Game." It is the first historical-reference book ever published about the sport, and includes the rosters of the most prominent early clubs with results of games played from their beginnings through 1866. The original 200-page chapter, a seminal work of baseball historiography, is reproduced here in full, supplemented by contemporary images and captions by nineteenth-century baseball historians John Freyer and Mark Rucker.

Linking Enterprise Data Mar 26 2022 Enterprise data is growing at a much faster rate than traditional technologies allow. New enterprise architectures combining existing technologies are desperately needed. This book suggests a way forward by applying new techniques of the World Wide Web to enterprise information systems. Linking Enterprise Data is an edited volume contributed by worldwide leaders in Semantic Web and Linked Data research, standards development and adoption. Linking enterprise data is the application of World Wide Web architecture principles to real-world information management issues faced by commercial, not-for-profit and government enterprises. This book is divided into four sections: Benefits of applying Linked Data principles in enterprise settings, enterprise approval and support of Linked Data projects, specific Linked Data techniques and a number of real-world success stories from early enterprise adopters. Linking Enterprise Data targets professionals working as CTOs, CIOs, enterprise architects, project managers and application developers in commercial, not-for-profit and government organizations concerned with scalability, flexibility and robustness of information management systems. Computer science graduate students and researchers focusing on enterprise information integration will also benefit.

Virtual Organizations Nov 09 2020 The area of Virtual Organizations as a main component of the new discipline of Collaborative Networks has been the focus of research globally. The fast evolution of the information and communication technologies and in particular the so-called Internet technologies, also represents an important motivator for the emergence of new forms of collaboration. However, the research in many of these cases is highly fragmented, considering that each project is focused on solving specific problems. As such, there is no effective consolidation/harmonization among them in order to have an effective impact and facilitate the interaction among the involved experts. This book represents a contribution to the consolidation of the already vast amount of empirical knowledge and practical experience. A synthesis of results collected from the analysis of numerous projects and industry case studies is presented, with focus on: Principles and models, ICT infrastructures and tools, Implementation issues, and Case studies.

Hybridising Housing Organisations Jun 24 2019 Social housing has long been delivered through mixed economy mechanisms, but there has been little focus in housing studies on what this means for housing organisations themselves. This book presents recent international research applying concepts of social enterprise and hybridity to illuminate organisational behaviour in the housing sector. It addresses critiques of the explanatory value of these concepts by exploring their underlying meanings and their application to diverse case studies worldwide. The concepts are found to be most useful where they inform dynamic analysis of hybridisation and identify underlying change mechanisms, rather than simply providing static descriptions of hybridity. Various chapters in the book show how analysis can be enriched by drawing on institutional theory to develop concepts such as competing organisational logics, trade-offs between social and commercial goals and resource transfers. The Book also looks at policy as a driver for hybridisation and to the regulatory challenges for policy systems that have come to rely on hybrid forms of delivery. A research agenda is proposed building on these conceptual frameworks to develop systematic approaches to data collection and analysis to enable clearer and more consistent meanings to emerge. This book was published as a special issue of *Housing Studies*.

Enabling Enterprise Transformation Sep 19 2021 Private enterprises in advanced economies have been learning to use information and communication technology (ICT) to innovate and transform their processes, products, services and business models, significantly improving productivity and competitiveness. Moreover, the ICT industry itself has become a major source of job creation and a contributor to economic growth and business transformation. A key question today is whether and how developing countries can learn to benefit from the ICT revolution, and what roles the government and private sector can play. Already, a number of developing countries have been inspired by the example of India and China, and are now seeking to jump on the outsourcing bandwagon. Nevertheless, with few exceptions in the developing world, little attention has been paid by policymakers and practitioners to invest systematically and proactively in ICT-enabled growth, poverty reduction and grassroots innovation. Most communities and small and medium-sized enterprises in developing countries, for example, face multiple constraints to adopting and leveraging this general purpose technology, and lack the capabilities for maximizing its potential. In "Enabling Enterprise Transformation", Nagy Hanna draws on his rich experience of over 35 years at the World Bank and other aid agencies as a development strategist and ICT policy expert, the most current research, and best practices from around the world to provide practical tools for promoting economic and social transformation through ICT. He assesses various initiatives to develop and diffuse ICT, such as innovation funds, incubators, parks, public-private partnerships, and comprehensive promotion programs. He argues for the strategic options now open for developing countries to participate in ICT production, to deploy ICT to transform industries and services, and to leverage ICT as a new national infrastructure for improving the business environment and enhancing the competitiveness of the whole economy. The challenge for leaders in developing countries is to create such social and institutional dynamics for learning about ICT use and adaptation at many levels. Lessons gained so far from programs to build these social learning and innovation capabilities at the institutional and grassroots levels should be shared among developing countries, and a dialogue among business leaders, policymakers, development agencies, educational institutions, and the general citizenry must be advanced.

Network Enterprises Jan 30 2020 Building on the historical analysis of organizations and theories that have influenced their development, Gianfranco Dioguardi provides an insightful exploration of the network enterprise and its evolution from the Medieval guilds to the present innovation clusters of Silicon Valley, the Research Triangle, Route 128, and other regions in the U.S and around the world. Providing in-depth analysis of production systems and the evolution of "lean manufacturing" principles, Dioguardi integrates history, sociology, management theory, and economics to explore the dynamics of organizations that operate as networks and interact with other firms along the supply chain and in complementary industries. In a technology-enabled environment, the boundaries between products and services and across enterprises become blurred--and create the context for entrepreneurship, innovation, and dissemination of knowledge. Several chapters are devoted to practical concerns of managing the network enterprise, with a particular interest in the ethical and cultural issues. Dioguardi concludes with discussion of the role of the network enterprise in new firm creation and economic growth.

The SIM Guide to Enterprise Architecture Jul 18 2021 Enterprise architecture is leading IT's way to the executive boardroom, as CIOs are now taking their place at the management table. Organizations investing their time, money, and talent in enterprise architecture (EA) have realized significant process improvement and competitive advantage. However, as these organizations discovered, it is one thing to acquire a game-changing technology but quite another to discover ways to use it well. A project of the Society for Information Management's Enterprise Architecture Working Group and edited by Leon A. Kappelman, *The SIM Guide to Enterprise Architecture* provides insights from leading authorities on EA, including John Zachman, Larry DeBoever, George Paras, Jeanne Ross, and Randy Hite. The book supplies a solid understanding of key concepts for effectively leveraging EA to redesign business processes, integrate services, and become an Information Age enterprise. Beginning with a look at current theory and frameworks, the book discusses the practical application of enterprise architecture and includes a wealth of best practices, resources, and references. It contains the SIM survey of IT organizations' EA activities, which provides important metrics for evaluating progress and success. Successful businesses exploit synergy among business functions and push the boundaries of process design. IT's cross-functional position uniquely qualifies it to lead process innovation. EA lets CIOs integrate technology with business vision and is the roadmap for implementing new systems, changing behavior, and driving value. This book explores the vision, foundation, and enabling technology required to successfully transform organizations with enterprise architecture.

The West Branch Mill of the Sierra Lumber Company Aug 26 2019 In the late 1800s, the green gold of California's inland timber belt included the long-coned sugar pine and cinnamon-dusted ponderosa pine of Big Chico Creek Canyon. Tucked into the steep terrain of present-day Butte and Tehama Counties, the bustling West Branch Mill logging operations moved timber from the foothills east of Chico to waiting markets in Sacramento, Marysville and San Francisco. Local author Andy Mark recounts the lesser-known history of the West Branch Mill, recalling a time when resident physician Newton T. Enloe treated the daring men who faced daily peril, John Bidwell's bumpy and sometimes treacherous Humboldt Wagon Road was essentially the only route to town and Big Chico Creek was lined with an elevated flume running lumber and ambulance rafts.

Farm Sector Restructuring in Belarus Jul 06 2020 Agriculture remains the main source of employment and livelihood for the large rural population of many transition countries, especially among the former Soviet republics. Accordingly, the World Bank continuously monitors the progress of land reform and farm restructuring in the region because of the potential impact of these processes on rural development and poverty alleviation in rural areas. The present study on Belarus is the latest addition to a long and growing series of World Bank publications on land reform and farm restructuring in the former socialist countries of Europe and Central Asia. The unique features of all these publications is their reliance on first-hand empirical information collected through extensive farm surveys of various rural constituencies. Analysis of survey findings enables the World Bank to base its policy dialogue with governments in the region on solid empirical facts, making the Bank's recommendations more credible and relevant. The survey findings in this volume will provide a platform for useful policy discussions with this country's government and supply international donors that are active there with essential information to design their strategic programs.
