SAP Hardware Solutions Feb 02 2020 The goal of this text is to describe the technical design aspects of the IT infrastructure; it does not give the details of installing and customizing SAP software, nor business process reengineering. Using primarily HP products for the solution examples, the chapters guide the reader through the foundation of the systems from an IT perspective, reviews its business application and architecture and introduces the server systems, then describes data storage, high availability and recovery solutions, client PCs with front-end user interfaces, output management and printing solutions, network infrastructure and requirements, cabling designs, LANs and WANs, and connecting mySAP.com to the Internet. Both authors are members of the HP-SAP International Competence Center. Annotation copyrighted by Book News, Inc., Portland, OR *Facility Location* Oct 31 2019 The book covers both theory and applications of locational analysis (LocAn). The reader will see the power of LocAn models in various real-world contexts, varying from communication design to robotics and mail delivery. It is divided into two parts. The first part contains an overview of some of the LocAn methodologies. The second part describes in thorough detail some selected applications. The text provides researchers with an excellent and well thought-out review of available location models.

Routledge Handbook of Global Health Security Aug 10 2020 This new Handbook presents an overview of cutting-edge research in the growing field of global health security. Over the past decade, the study of global health and its interconnection with security has become a prominent and rapidly growing field of research. Ongoing debates question whether health and security should be linked; which (if any) health issues should be treated as security threats; what should be done to address health security threats; and the positive and negative consequences of 'securitizing' health. In academic and policy terms, the health security field is a timely and dynamic one and this handbook will be the first work comprehensively to address this agenda. Bringing together the leading experts and commentators on health security issues from across the world, the volume comprises original and cutting-edge essays addressing the key issues in the field and also highlighting currently neglected avenues for future research. The book intends to provide an accessible yet sophisticated introduction to the key topics and debates and is

organised into four key parts: Health Securities: the fundamental conceptual issues, historical links between health and security and the various ways of conceptualising health as a security issue Threats: those health issues which have been most frequently discussed in security terms Responses: the wide range of contemporary security-driven responses to health threats Controversies: the securitization of health, its impact on rights and justice and the potential distortion of the global health agenda This book will be of great interest to students of global health security, public health, critical security studies, and International Relations in general.

The Innovation Imperative for Developing East Asia Mar 05 2020 After a half century of transformative economic progress that moved hundreds of millions of people out of poverty, countries in developing East Asia are facing an array of challenges to their future development. Slowed productivity growth, increased fragility of the global trading system, and rapid changes in technology are all threatening export-oriented, labor-intensive manufacturing—the region’s engine of growth. Significant global challenges—such as climate change and the COVID-19 pandemic—are exacerbating economic vulnerability. These developments raise questions about whether the region’s past model of development can continue to deliver rapid growth and poverty reduction. Against this background, *The Innovation Imperative in Developing East Asia* aims to deepen understanding of the role of innovation in future development. The report examines the state of innovation in the region and analyzes the main constraints that firms and countries face to innovating. It assesses current policies and institutions, and lays out an agenda for action to spur more innovation-led growth. A key finding of the report is that countries’ current innovation policies are not aligned with their capabilities and needs. Policies need to strengthen the capacity of firms to innovate and support technological diffusion rather than just invention. Policy makers also need to eliminate policy biases against innovation in services, a sector that is growing in economic importance. Moreover, countries need to strengthen key complementary factors for innovation, including firms’ managerial quality, workers’ skills, and finance for innovation. Countries in developing East Asia would also do well to deepen their tradition of international openness, which could foster openness in other parts of the world. Doing so would help sustain the flows of ideas, trade, investment, and people that facilitate the creation and diffusion of knowledge for innovation.

Revolutionary Social Work Sep 30 2019 This book shows how social work can be an active agent for promoting revolutionary changes in order to counter the global neoliberal market fundamentalism which is destroying our planet and reinforcing socioeconomic inequalities, political instability, antidemocratic political ideologies and movements, small wars, conflicts, racism and other forms of oppression. Providing case-studies from South Africa, Chile, Iran, Europe, Australia and the USA written by leading critical and radical social work scholars, it shed light on consequences of the global neoliberal racial capitalism and postcolonial oppression. By presenting innovative ideas and suggestions for a revolutionary social work aim at promoting systemic changes and eliminating the roots of social problems it will be of interest to all scholars and students of social work, community development and social justice more broadly.

Internationalizing Higher Education with National Characteristics: Similar Global Trends but Different Responses May 07 2020 In an era of globalization, internationalization of higher education (IHE) has been constructed as an almost inevitable trend and has become a common pursuit of many nations in their higher education (HE) policies. This book focuses on two nations, China and Australia, in terms of this trend. The broadest aim of this book was to find out the interactive relationships between global and national pressures in policy development by comparing the international HE policies in China and Australia. The three categories, overarching meta-policies at the macrolevel (nation), institution focused policies at the mesolevel (universities), and people focused policies at the microlevel (individuals) are documented and analyzed. Similarities and differences are identified. Similarities include promoting and deepening IHE as one important agenda in national policies at the macrolevel in the two nations, promoting transnational cooperation in the provision of HE at the mesolevel, as well as increasing international student numbers and encouraging an outflow of student learning and exchanges at the microlevel. Differences include China’s soft power initiatives and Australia’s appeal for the sustainability of international HE as a national priority in the area of IHE at the macrolevel; the focus on “World Class Universities” construction in China and strengthening the overall HE system in Australia; and different issues in relation to people mobility and brain circulation—specifically, encouraging more outflow of students and attracting more inflow of talents and international students in China, and over-reliance on international students financially in Australia. It is suggested that different responses to the global trends reflect the specificities of each nation and the ways path-dependent factors mediate global pressures. This comparison will facilitate a better understanding of how globalization has affected and been responded to in IHE policies and enable a better understanding of their path-dependent mediation through a focus on two specific sets of national policies.

Open Mapping towards Sustainable Development Goals Jan 03 2020 This collection amplifies the experiences of some of the world's young people who are working to address SDGs using geospatial technologies and multi-national collaboration. Authors from every region of the world who have emerged as leaders in the YouthMappers movement share their perspectives and knowledge in an accessible and peer-friendly format. YouthMappers are university students who create and use open mapping for development and humanitarian purposes. Their work leverages digital innovations - both geospatial platforms and communications technologies - to answer the call for leadership to address sustainability challenges. The book conveys a sense of robust knowledge emerging from formal studies or informal academic experiences - in the first-person voices of students and recent graduates who are at the forefront of creating a new map of the world. YouthMappers use OpenStreetMap as the foundational sharing mechanism for creating data together. Authors impart the way they are learning about themselves, about each other, about the world. They are developing technology skills, and simultaneously teaching the rest of the world about the potential contributions of a highly connected generation of emerging world leaders for the SDGs. The book is timely, in that it captures a pivotal moment in the trajectory of the YouthMappers movement's ability to share emerging expertise, and one that coincides with a pivotal moment in the geopolitical history of planet earth whose inhabitants need to hear from them. Most volumes that cover the topic of sustainability in terms of youth development are written by non-youth authors. Moreover, most

are written by non-majoritarian, entrenched academic scholars. This book instead puts forward the diverse voices of students and recent graduates in countries where YouthMappers works, all over the world. Authors cover topics that range from water, agriculture, food, to waste, education, gender, climate action and disasters from their own eyes in working with data, mapping, and humanitarian action, often working across national boundaries and across continents. To inspire readers with their insights, the chapters are mapped to the United Nations 17 Sustainable Development Goals (SDGs) in ways that connect a youth agenda to a global agenda. This is an open access book.

Supply Chain Management Jan 27 2022 Challenges faced by supply chains appear to be growing exponentially under the demands of increasingly complex business environments confronting the decision makers. The world we live in now operates under interconnected economies that put extra pressure on supply chains to fulfil ever-demanding customer preferences. Relative attractiveness of manufacturing as well as consumption locations changes very rapidly, which in consequence alters the economies of large scale production. Coupled with the recent economic swings, supply chains in every country are obliged to survive with substantially squeezed margins. In this book, we tried to compile a selection of papers focusing on a wide range of problems in the supply chain domain. Each chapter offers important insights into understanding these problems as well as approaches to attaining effective solutions.

Access to Medicine in the Global Economy Jan 15 2021 Access to medicine is a topic of widespread interest. However, some issues that impact such access are presently inadequately understood. In particular, international laws require most nations to provide patents on drugs, resulting in premium prices that limit access. In Access to Medicine in the Global Economy, Professor Cynthia Ho explains such laws and their impact for a diverse group of readers, from scholars and policy makers to students in a variety of disciplines. This book explains and interprets important international agreements, beginning with the landmark Agreement on Trade Related Aspects of Intellectual Property (TRIPS), but also including more recent free trade agreements and the pending Anti-Counterfeiting Trade Agreement (ACTA). Professor Ho addresses controversial topics, such as when a nation can provide a compulsory license, as well as whether a nation may suspend in-transit generic goods. The book also discusses how patent-like rights (such as "data exclusivity") prevent lower-cost generic medicines from entering into the marketplace and provides strategies for minimizing the harm of such rights. Clear explanations and diagrams, frequently asked questions, and case studies make these topics accessible to any reader. The case studies also provide a theory of patent perspectives that helps explain why access to medicine, though a universal goal, remains elusive in practice. The book aims to provide an important first step toward eventual workable solutions by promoting a better understanding of existing and future laws that impact access to medicine.

Civics and Citizenship Education in Australia Feb 13 2021 Civics and Citizenship Education in Australia provides a comprehensive analysis of teaching and learning in this field in Australian schools, drawing on case study material to demonstrate the current practice in the field. Reflecting on the issues and possibilities raised by the inclusion of civics and citizenship education in the new national Australian curriculum, leading national and international scholars analyse the subject's theoretical, curricular and pedagogical bases and approaches. Placing civics and citizenship education within historical and contemporary contexts, the book critically explores a range of issues concerning the development, organisation and teaching of the subject. These include how the subject might include indigenous, global and Asian perspectives, and how it may help

students to engage with issues around sustainability, active citizenship, diversity, religion and values. The final chapters written by scholars from England, the USA, Canada, Hong Kong and Singapore adopt a comparative approach situating Australian civics and citizenship education in the wider international context.

Covid-19 and the Global Political Economy Mar 17 2021 Covid-19 and the Global Political Economy investigates and explores how far and in what ways the Covid-19 pandemic is challenging, restructuring, and perhaps remaking aspects of the global political economy. Since the 1970s, neoliberal capitalism has been the guiding principle of global development: fiscal discipline, privatisations, deregulation, the liberalisation of trade and investment regimes, and lower corporate and wealth taxation. But, after Covid-19, will these trends continue, particularly when states are continuing to struggle with overcoming the pandemic and violating one of neoliberalism's key principles: balanced budgets? The pandemic has exposed the fragility of the global political economy, and it can be argued that the intensification of global trade, tourism, and finance over the past 30 years has facilitated the spread of infectious diseases such as Covid-19. Therefore, economies in lockdown, jittery markets, and massive government spending have sparked interest in potentially re-evaluating certain features of the global political economy. This volume brings together leading and upcoming critical scholars in international relations and international political economy to provide novel, timely, and innovative research on how the Covid-19 pandemic is impacting (and will continue to impact) the global economy in important dimensions, including state fiscal policy, monetary policy, the accumulation of debt, health and social reproduction, and the future of austerity and the fate of neoliberalism. This book will be of great interest to students, scholars, and experts in international relations and international political economy, as well as history, anthropology, political science, sociology, cultural studies, economics, development studies, and human geography.

PRODUCTION PLANNING AND CONTROL Dec 14 2020 This comprehensive and up-to-date text, now in its Third Edition, describes how the latest techniques in production planning and control are applied to contemporary industrial setups so as to meet the ever-increasing demands in industrial organizations for better quality of services, for faster delivery of products and for adapting to the rapid changes taking place in the industrial scenario. With the demands in the industrial arena increasingly tending to be lumpy, the most effective strategy for planning and controlling production processes cannot be a static, preconceived one. Instead, it is one that is flexible and is capable of adapting to the erratic changes in demand patterns. Evolving such a strategy requires more of practical skill than mere theoretical knowledge of the subject. This book explores the demands of the present-day industrial environment and the techniques for addressing these demands through a number of case studies drawn from Indian industries. The efficacy of various planning strategies, the methods for implementing them, and their suitability for different industries have been clearly explained in relation to these cases. While the essentials of theory have been covered in a simple and straightforward style, the stress is on developing the practical skills required to tackle the unpredictable problems and the unforeseen demands that pose a formidable challenge to modern industries. The book places emphasis as much on the principles of heuristic techniques as on the systematic approach to production planning. This book would serve as a useful textbook to postgraduate students of management as well as undergraduate students of industrial engineering. It will be equally useful to the teaching community and the practicing professionals. **NEW TO THE THIRD EDITION** • Includes a new chapter on 'Leagile Manufacturing: A Contemporary Manufacturing Syndrome' (Chapter 11) • Provides several references to explore more in the field **KEY FEATURES** • Gives solved problems that serve as numerical illustrations of the theoretical concepts. • The Case Studies given focus on the Indian scenario; these will be of great practical value to students and professionals alike. • Offers substantial coverage of the modern heuristic methods, the Kanban system and the ERP techniques.

Optimize visibility of final demand in the supply chain Jul 21 2021 Studienarbeit aus dem Jahr 2017 im Fachbereich BWL - Beschaffung, Produktion, Logistik, Note: 1,0, Ernst-Abbe-Hochschule Jena, ehem. Fachhochschule Jena, Sprache: Deutsch, Abstract: The problem in the simulation game "Supply Chain Simulation Module" was that the different players of a chain (supplier, manufacturer, retailer / wholesaler (customer)) communicated exclusively with orders in order to fulfill the given market demand or the needs of their teammates. Due to delays in deliveries, there were increased orders in period three, which

already exceeded the final demand as a whole. This led to a chaotic ordering and / or demand behavior. The uncertainties in the demand forecast initially led to bottlenecks. The bottlenecks led to higher safety stocks, which led to overproduction. This led to a negatively evolving supply chain that affected the company. This phenomenon is also referred to as a bullwhip effect. In this assignment, a possible cause, which has strengthened the bullwhip effect, is investigated. The role of the author in order management as well as the presentation topic "Information and Funds Flow in Supply Chains" are taken into account. During the execution of the planning game, the author was free to choose within the order management whether he should initiate an internal production or serve the customer demand from the warehouse. This free decision leaves a very high risk of the bullwhip effect taking place. Decisions are made without knowing all possible outcomes which can have a reverberating effect on the entire company. For this reason the assignment is being investigated. It is researched which tools are necessary for the order management to make secure and reliable decisions in the future. In addition, it will be shown how the communication within the company can be improved.

Advanced Planning in Supply Chains Dec 26 2021 Advanced Planning Systems (APS) are a key enabler of the supply chain management. However, APS are highly complex and difficult to comprehend. This book provides students with valuable insights into the capabilities of state-of-the-art APS and bridges the gap between theory (model building and solution algorithms), software implementation, and adaptation to a specific business case. Our business case – named Frutado – provides a unifying framework for illustrating the different planning tasks that arise in a company – from demand planning to the distribution of goods – that are addressed by APS. In addition, the book guides through interactive learning units which have been created and recorded for each module of SAP's APS. Learning units can be downloaded free of charge ready to be displayed in a web browser. Together, the textbook and the learning units provide the required skills to better understand the concepts, models, and algorithms underlying today's APS.

Knowledge Management for Health Care Procedures May 19 2021 The incursion of information and communication technologies (ICT) in health care entails evident benefits at the levels of security and efficiency that improve not only the quality of life of the patients, but also the quality of the work of the health care professionals and the costs of national health care systems. Leaving research approaches aside, the analysis of ICT in health care shows an evolution from the initial interest in representing and storing health care data (i. e. , electronic health care records) to the current interest of having remote access to electronic health care systems, as for example HL7 initiatives or telemedicine. This sometimes imperceptible evolution can be interpreted as a new step of the progress path of health care informatics, whose next emerging milestone is the convergence of current solutions with formal methods for health care knowledge management. In this sense, K4CARE is a European project aiming at contributing to this progress path. It is centered on the idea that health care knowledge represented in a formal way may favor the treatment of home care patients in modern societies. The project highlights several aspects that are considered relevant to the evolution of medical informatics: health care knowledge production, health care knowledge integration, update, and adaptation, and health care intelligent systems.
